Health Impact Assessment for Environmental Epidemiologist

Convener and Chair  Dr. David Rojas-Rueda  
*Colorado State University, Fort Collins, CO*

Duration: Half Day

The course will describe the methods and utility of Health Impact Assessment (HIA) for environmental health. The students will learn the HIA types and steps and will identify how HIA could be used as a tool for policy translation in environmental health. HIA has been proposed by the World Health Organization, National and Regional authorities as a key tool for health in all policies and has been widely used in the environmental health context.  
Content:  - Introduction to HIA  - HIA history, types and steps  - HIA examples for Environmental Health  - Participatory HIA, Quantitative HIA, and Monetary evaluations  - HIA tools and resources  - Conclusions / Q&A.
